Specification - measuring accuracy

Reference conditions in accordance with IEC 60770.

Ambient temperature 20 °C (68 °F), rel. humidity 65 %, atmospheric pressure 1,013 hPa (1,013 mbar), position of measuring cell (separating diaphragm areas) vertical, measuring span based on zero point, separating diaphragms made from stainless steel AISI 316 L or Hastelloy, silicone oil filling fluid, HART digital trim values equal to 4 and 20 mA span end points, linear characteristic curve.

Coordination with NACE directives

- The labeled materials comply with the directive NACE MR0175/ISO 15156 for the application in sulfurous environments during the oil and gas production. As different application boundaries apply for different materials, please observe the version of the directive that is current. The materials AISI 316 / AISI 316L, Hastelloy C 276, Monel 400 also comply with the directive NACE MR0103 for the application in sulfurous environments in oil and gas processing.
- According to NACE MR0175, materials for pressurized screws are differentiated by application:
 - in contact with sulfurous environments: screws, that can come in direct contact with sulfurous environments, e.g. by underfloor installation or installation in dense protective enclosures
 - not in contact with sulfurous environments: screws, which are only in contact with standard, non-sulfurous environments

The cap screw of the pressure transmitter 266MST, comply with the requirements according to NACE MR0175 for screws that are not in contact with sulfurous environments.
